PROFESSIONAL SUMMARY

Final-year B.Tech student in Computer Science and Engineering (AI/ML specialization) with hands-on experience building full-stack web applications and production-ready AI-powered systems. Proficient in React.js, JavaScript (ES6+), HTML5, CSS3, Python, and FastAPI, with practical knowledge of Node.js, Express.js, and REST API design. Experienced in LLM integration, Retrieval-Augmented Generation (RAG), and Generative AI application development. Seeking a software developer or frontend developer role to deliver impactful solutions in a growth-driven engineering team.

TECHNICAL SKILLS

Programming Languages: Python

Frontend Development: HTML5, CSS3, JavaScript (ES6+), React.js

Backend Development: FastAPI, Node.js, Express.js, REST APIs, LLM, RAG

Databases: SQL

Problem Solving: Data Structures and Algorithms (basics)

Tools & Platforms: Git, GitHub

Soft Skills: Team Collaboration, Communication, Critical Thinking

EDUCATION

Bachelor of Technology — Computer Science and Engineering (AI & ML Specialization) | 2022 – 2026

Nalla Malla Reddy Engineering College, Hyderabad | CGPA: 8.93 / 10.0

Intermediate — Mathematics, Physics and Chemistry | 2020 – 2022

Sri Vijaya Sai Junior College | Score: 91.7%

PROJECTS

Medical Health Assistant (RAG) | Python, FastAPI, LLM, RAG, SQL | [Live Demo](#)

- Designed and deployed an AI-powered medical query system using Python, FastAPI, and Retrieval-Augmented Generation (RAG), improving health information retrieval accuracy by integrating large language models with structured and vector-based data sources.
- Developed modular RESTful API endpoints for AI-driven response generation, applying SOLID design principles and OOP patterns to produce maintainable, production-ready backend code.
- Reduced irrelevant responses by combining SQL-based and vector-based retrieval strategies; deployed on AWS cloud infrastructure with full end-to-end testing.

NxtWatch — Video Streaming Platform | React.js, HTML5, CSS3, JavaScript (ES6+), Node.js, REST APIs, JWT | [Live Demo](#)

- Engineered a fully responsive video streaming web application with React.js, implementing JWT authentication, protected routes, and React Router for seamless navigation across 6 feature-complete pages.
- Integrated RESTful APIs to dynamically render content with loading, success, and error UI states, improving user experience and reducing perceived load time.
- Built reusable React components for search, like/dislike actions, saved video management, and a dark/light theme toggle, reducing code duplication by 40% across the application.

Jobby App — Job Search Portal | React.js, HTML5, CSS3, JavaScript (ES6+), REST APIs, JWT | [Live Demo](#)

- Built a responsive job search portal with React.js and React Router featuring JWT-based login, keyword search, salary and employment-type filters, and a dedicated job details page.
- Managed all three UI states (loading, success, failure) for every API call, ensuring a polished, production-quality user experience across mobile and desktop screen sizes.
- Structured the codebase using self-contained, reusable components following component-driven development best practices, enabling rapid feature extension with zero design regression.

CERTIFICATIONS

The Complete Python Pro Bootcamp — 100 Days of Code | Udemy | [View Certificate](#)

- Completed 100 project-based exercises in Python, OOP patterns, backend logic, and algorithmic problem-solving.

Professional Certificate in DevOps | Udemy | [View Certificate](#)

- Trained in CI/CD pipeline setup, automation workflows, version control, and modern software delivery practices.

OpenAI & NxtWave Generative AI Buildathon | NxtWave | [View Certificate](#)

- Prototyped AI-driven applications using Generative AI and LLM-powered tools; presented solutions to a panel of industry judges.

AWS Mega Workshop | NxtWave CCBP 4.0 Academy | [View Certificate](#)

- Gained hands-on experience with AWS cloud services, application hosting, and scalable infrastructure deployment.

NxtCode Challenge | NxtWave CCBP 4.0 Academy | [View Certificate](#)

- Demonstrated algorithmic thinking and problem-solving skills in a competitive timed coding evaluation.

ACHIEVEMENTS

- Maintained a CGPA of 8.93/10.0 throughout the B.Tech program, consistently ranked among the top performers in the department.
- Successfully developed and deployed 3 production-ready projects demonstrating end-to-end full-stack and AI/ML engineering capabilities.
- Completed 100 Days of Code Python Bootcamp, building 100 projects covering web development, automation, data science, and OOP.
- Participated in the OpenAI & NxtWave Generative AI Buildathon, designing and presenting an LLM-powered application prototype.
- Earned the AWS Mega Workshop certification, gaining practical cloud infrastructure and deployment skills.
