PROFESSIONAL SUMMARY

Final-year B.Tech graduate (2026) in Computer Science and Engineering (AI/ML specialization) with strong Python programming, Data Structures & Algorithms, and Object-Oriented Programming fundamentals, and hands-on experience building Generative AI applications using Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), embeddings, and vector databases. Practical experience designing agentic AI systems with LangChain and OpenAI APIs, including tool-augmented workflows and safety-conscious escalation logic for low-confidence outputs. Comfortable applying machine learning and deep learning fundamentals, building and integrating RESTful APIs, and communicating technical work clearly to both technical and non-technical stakeholders. Actively practicing DSA on LeetCode (100+ problems solved) and maintaining an active GitHub profile. Seeking a Generative AI Engineer role to apply strong Python, DSA, and GenAI fundamentals to real-world AI system design.

TECHNICAL SKILLS

Programming Languages: Python

Core Fundamentals: Data Structures & Algorithms (100+ solved on LeetCode), Object-Oriented Programming (OOP), Git & GitHub

Generative AI & LLMs: LLM Integration, Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Vector Databases & Similarity Search, Agentic AI, Tool-Augmented LLM Workflows, AI System Design

Responsible AI: Low-confidence output detection, human-in-the-loop escalation design

AI Frameworks & Tools: LangChain, OpenAI APIs

Machine Learning & Deep Learning Foundations: Supervised & Unsupervised Learning, Neural Networks, Transformer Architecture Concepts (academic coursework, AI/ML specialization)

Backend Development: FastAPI, Node.js, Express.js, REST APIs

Frontend Development: HTML5, CSS3, JavaScript (ES6+), React.js

Databases: SQL

Tools & Platforms: Git, GitHub, AWS

Soft Skills: Communication (technical-to-non-technical), Team Collaboration, Critical Thinking

EDUCATION

Bachelor of Technology — Computer Science and Engineering (AI & ML Specialization) | 2022 – 2026

Nalla Malla Reddy Engineering College, Hyderabad | CGPA: 8.57 / 10.0

Intermediate — Mathematics, Physics and Chemistry | 2020 – 2022

Sri Vijaya Sai Junior College | Score: 91.7%

PROJECTS

Persona-Adaptive Customer Support Agent | Python, LangChain, OpenAI GPT-4o, RAG, ChromaDB, Embeddings, Streamlit | [GitHub](#)

- Built an agentic AI support system that detects customer persona (Technical Expert, Frustrated User, Business Executive) via zero-shot LLM classification and adapts response tone and content accordingly.
- Designed a RAG pipeline using LangChain, OpenAI embeddings, and the ChromaDB vector database, with recursive chunking and top-k similarity retrieval to ground responses in a private knowledge base.
- Implemented escalation logic and AI workflow design that detects low-confidence or out-of-scope queries and auto-generates a structured JSON handoff summary for human agents.

Medical Health Assistant (RAG) | Python, FastAPI, LLM, RAG, Embeddings, SQL | [Live Demo](#)

- Designed and deployed an AI-powered medical query system using Python, FastAPI, and Retrieval-Augmented Generation (RAG), improving health information retrieval accuracy by integrating large language models with structured and vector-based data sources.
- Developed modular RESTful API endpoints for AI-driven response generation, applying SOLID design principles and OOP patterns to produce maintainable, production-ready backend code.
- Reduced irrelevant responses by combining SQL-based and vector-based retrieval strategies; cleaned and preprocessed source datasets before ingestion and deployed on AWS cloud infrastructure with full end-to-end testing.

Vagabond AI — Full-Stack AI Travel Planner | Next.js, TypeScript, Express.js, MongoDB, Google Gemini API, JWT | [GitHub](#)

- Built a production-ready, multi-user AI travel planning platform with a Next.js 15 frontend and an Express/TypeScript backend, generating custom day-by-day itineraries, budget estimates, and hotel recommendations via Google Gemini 2.5 Flash.
- Implemented secure JWT-based authentication with bcrypt password hashing, and hardened the API with Helmet, rate limiting, MongoDB input sanitization, and Zod schema validation.
- Designed an AI-driven packing assistant and travel risk advisor using structured JSON prompt engineering with Gemini, persisting itinerary and packing state in MongoDB Atlas.

CERTIFICATIONS

The Complete Python Pro Bootcamp — 100 Days of Code | Udemy | [View Certificate](#)

- Completed 100 project-based exercises in Python, OOP patterns, backend logic, and algorithmic problem-solving.

OpenAI & NxtWave Generative AI Buildathon | NxtWave | [View Certificate](#)

- Prototyped AI-driven applications using Generative AI and LLM-powered tools; presented solutions to a panel of industry judges.

NxtCode Challenge | NxtWave CCBP 4.0 Academy | [View Certificate](#)

- Demonstrated algorithmic thinking and problem-solving skills in a competitive timed coding evaluation.

AWS Mega Workshop | NxtWave CCBP 4.0 Academy | [View Certificate](#)

- Gained hands-on experience with AWS cloud services, application hosting, and scalable infrastructure deployment.

Data Analytics Job Simulation | Deloitte | [View Certificate](#)

- Completed a job-simulation covering data analysis, forensic technology, and client-ready reporting.

Artificial Intelligence Job Simulation | Tata Group | [View Certificate](#)

- Simulated real-world AI use cases, including data-driven decision-making and model-based recommendations.

ACHIEVEMENTS

- Solved 100+ Data Structures and Algorithms problems on [LeetCode](#), strengthening problem-solving and coding-interview readiness.
- Actively maintains [GitHub](#) with regular commits across personal and course projects, reflecting consistent, hands-on coding practice.
- Maintained a CGPA of 8.57/10.0 throughout the B.Tech program, consistently ranked among the top performers in the department.
- Successfully developed and deployed 3 production-ready projects demonstrating end-to-end full-stack and AI/ML engineering capabilities, including an LLM-powered RAG system.
- Completed 100 Days of Code Python Bootcamp, building 100 projects covering web development, automation, data science, and OOP.
- Participated in the OpenAI & NxtWave Generative AI Buildathon, designing and presenting an LLM-powered application prototype.
- Earned the AWS Mega Workshop certification, gaining practical cloud infrastructure and deployment skills.
